

TECHNI-SILENCE INC.

PANEL CORE

Materials

TECHNI-SILENCE panels are manufactured from 96 to 112 kg/m³ (6 to 7 lb. per cubic foot fiberglass. It is noted for its excellent acoustical properties its dimensional stability and its extensive resistance to fire.

The panels are very light and because of the chemically hardened edges, the panels do not become deformed and can be easily handled and moved.

All **TECHNI-SILENCE** hardware is fastened to the panel with chemical hardeners.

Fabric / Vinyl

TECHNI-SILENCE panels can be covered with most natural and synthetic fabric fibers.

TECHNI-SILENCE panels can also be covered with Web Core[®] vinyl specially manufactured to allow the panels to maintain their acoustical properties.

TECHNI-SILENCE reserves the right to determine if the selected fabric / vinyl is appropriate.
